

Communications

Communications operators from throughout the district continue to be trained and added to the team. We provide new member training, a quarterly workshop for all. Several members also attended COML or COMT training and continue to work on their position task books.

We completed the new portable radio grant project. Car 14 has 22 APX 8000 portable radios to support district communications.

At the Control Point, Michael Torosian continues to update Run Cards, oversee our communications and managing the lamresponding application. He also continues to be available for outreach to district Communications Centers for control point training and education.

Communications staff continue to build out the Zello for First responders' network. We provided 3 virtual workshops. The system hosts 300 plus subscribers with 125 channels. We have connections to District 7 and 8 as well as to 14 other mutual aid partners.
